SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                1070 AACCCCCTGATTTACACAGCTTTTAACAAGAACTACAACAATGCCTTCAAG 1120

SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

as a neurotransmitter, a hormone, and a mitogen. The activity of this receptor is mediated by G proteins that inhibit adenylate cyclase activity.

SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors. Strongest to the other 5HT-1 subtype receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CYTOPLEANTIAL).

The present invention describes novel human proteins designated NOVX (where X is 1, 2a, 2b, 2c, 2d, 3, 4, 5, 6a, 6b, 7, 8, or 9). NOV1 is a tyrosine-protein kinase 6-like protein; NOV2a-d are keratin 4-like proteins; NOV3 is a collagen-like protein; NOV2a-d are keratin 1-like protein; NOV5 is a serotonin receptor-like protein; NOV6a and NOV65v are cold inducible glycoprotein 30-like protein; NOV7 is a matrilin-2-like protein; NOV9 is a tyrosine kinase-like protein. NOVX sequences have cytostatic, and inducible glycoproteins with a management of antiarteriosclerotic, cardiovascular, antidiabetic, immunosuppressive and neuroprotective activities, and can be used in gene therapy. The NOVX sequences can be used in therapeutics, particularly for treating, preventing or alleviating and van be used in gene therapy. The NOVX sequences can be used in therapeutics, particularly for treating.

Creventing or alleviating an VOVX-associated disorder or a pathological state in a subject, particularly a disorder related to cell signal processing and metabolic pathway modulation or diabetes. The NOVX sequences are also useful for determining the presence of or predisposition to a disease associated with altered levels of NOVX collypeptide or nucleic acid, particularly cancer. The NOVX sequences are nucleic acid, particularly cancer. The NOVX sequences are especially useful in therapeutic or prophylactic applications for a disease associated with altered levels of sequences are nucleic acid, particularly cancer. The NOVX sequences are especially useful in therapeutic or prophylactic applications for a disease associated with the treatment of for particular and the treatment of the treatment of the presence of the presence of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the process of the proce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ACCAGCAGCGGACCCGGGACCCCAAGCCCGAGGGATACTCGGTTCGACCCCGAGCGGC 124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       80

The invention relates to isolated human G-protein coupled receptor (GCREC) polypeptides and their biologically active fragments. GCREC and protein is useful in treating a disease or condition associated with an increase or decrease in expression of functional GCREC. The GCREC's are useful in the diagnosis, treatment and prevention of cell proliferative disorders (cancer, leukaemia, melanoma); neurological disorders (stroke, epilepsy, Parkinson's disease, dementia, Alzheimer's disease); autoimmune inflammatory disorder (thyroiditis, haemolytic anaemia, AIDS, multiple sclerosis); cardiovascular disorder (atherosclerosis, angina pectoris); gastrointestinal disorder (ulcer, cholelithiasis, gastroenteritis), metabolic disorders (diabetes); viral inflections (herpes virus) and in the assessment of the effects of exogenous compounds on the expression of the nucleic acid and amino acid sequences. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  125 GCCGTCCTGCCGGGCCGAGGGCCGCCTTCTCTCTTCACGGTCCTGGTGACGCTG 184

WPI; 2002-383182/41. N-PSDB; ABK71923 New cytoplasmic, nuclear, membrane bound and secreted NOVX polypeptides, useful for treating cancers and tumors, lung disorders, hematopoletic disorders, autoimmune diseases and immune disorders.

Claim 1 ; Page 60; 210pp; English.

The invention relates to an isolated NOVX polypeptide selected from NOV1a, NOV1a, NOV1a, NOV1a, NOV1a, NOV1a, NOV1a, NOV1a, NOV1b, NOV1a, NOV1b, NOV1a, NOV1b, NOV1a, NOV1b, Nov1b, Nov1

ABG60235 standard; protein; 380 AA.

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprising the vector compressed in an animal subjected to pain and a subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the activity in an animal of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound useful that regulates the activity in an animal of one or more of the polypeptides given in the contract of the polymentides of the contract of the natural of one or more of the polypeptides given in the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the contract of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the contract of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of the polymentides of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                   Oligonucleotides corresponding to conserved regions of known serotonin receptors were used in PCR of mouse brain RNA in presence of reverse transcriptase and the products were sequenced. One product with homology to known receptors was labelled and used to probe a cDNA library in Lambda UniZAP. The 2036 bp sequence AAQ70264 was identified and deduced to encode a protein having 7 hydrophobic domains which represents a novel serotonin receptor which was designated 5HTSD (AAR5066).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to transgenic animals, compositions and methods relating to the characterisation of gene function. The invention also relates to transgenic mice comprising mutations in 5-hydroxy-tryptophan (5-HT)5B receptor gene. The transgenic mice are useful for identifying an agent that modulates the phenotype such as increased depression or increased pain sensitivity. They are also useful for identifying potential therapeutic agents for the treatment of pain or depression and for evaluating a potential therapeutic agent capable of affecting a condition associated with a mutation in a 5-HT5B receptor gene. Transgenic animals of the invention are also useful for testing the efficacy of proposed genetic and pharmacological therapies for human diseases such as neurological, neuropsychological or psychotic illnesses. The present sequence is mouse 5-HT5B receptor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The protein sequences shown in ADC85549-ADC87617 represent GPCR's of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GlyAlaValLeuProGlyArgGlyProProPheSerValPheThrValLeuValValThr 313

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                  The invention relates to single nucleotide polymorphisms in the gene encoding human 5-hydroxytryptamine (serotonin) receptor SA (HTR5A). A method for haplotyping the HTR5A gene in an individual comprises identifying the nucleotide at one or more polymorphic sites and etermining whether one of the copies of the gene is defined by one of the HTR5A haplotypes given in the specification or whether both copies are defined by a haplotype pair. This method is useful in genotyping, whereby all possible haplotype pairs can be assigned to specific genotypes. An association between a triait and a haplotype or haplotype or pair of the HTR5A gene can be identified by comparing the frequency of the haplotype or haplotype frequency of the haplotype or haplotype frequency in the trait population. The frequency of the haplotype of haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype or haplotype or haplotype frequency in the trait population indicates the trait is associated with the haplotype or haplotype or haplotype or haplotype frequency of tunction of HTR5A, and in screening for candidate drugs to treat diseases related to HTRSA activity, such as neurological disorders, including configuration and epilepsy. This sequence represents the human HTRSA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    244

The present invention describes antigenic peptides (1) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (1) an assay for the detection of a particular Gretien-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or aridity for a particular GPCR. (1) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, cell regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, Alzhaimer's disease, atherosclerosis, bacterial, fungal, protoscan or viral infections.
                                                                                                      New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              184
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       185 CTAGTGCTGCTGATCGCTGCCACTTTCCTGTGGAACCTGCTGGTTCCGGTCACCATCCCG 244

                                                                                                                                                                                                                                                                                                                                                The present relates to a method for identifying a compound for treating uvological disorders e.g., urinary incontinence including overactive/ oversensitive bladder, overflow urinary incontinence, stress urinary incontinence caused by dysfunction of the bladder, urethra or central or peripheral nervous system, prostatitis, benign prostatic hyperplasia, cancer of the prostate or kidney disorders. The method is also useful for urological disorder. The invention is also used in gene therapy. The present sequence is human GPCR known as 5-hydroxytryptamine 5A (5-HT-5A) (serotonin receptor)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         484

New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.

Claim 1; Page; 1017pp; English

The inversion discusses a composition which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynuclectide, a host cell comprising the vector, a method for identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a which is differentially regulated in an animal subjected to pain an array, a method for identifying an agent that increases or decreases the expression of the polynuclectide sequence which is differentially expressed in neuronal tissue of a first animal composition of a polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of a polynuclectide sequence which is differentially expressed in an animal subjected to pain, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more composition activity in an animal of one or more of the polynectides given in the compound a pharmaceutical composition comprising the one or more polyneptides or their antibodies. The polynuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain and a pharmaceutical composition comprising the one or more conjugates its activity is useful for preparing a medicament for treating pain and e.g. spinal segmental nerve injury (CNI) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal segmental reversed discendent (e.g. spinal part). The sequence presented is a human protein (shown in Table 2 of the sequence data for this patent did not form part of the printed print/pub/published_pot_sequence of the properticent of the composition of the print of the print of the propertice invention discloses a composition comprising two or more isolated

Sequence 357 AA;
